

Part No LEGEND

Prefix No	Description
12-.....	Selected Cover Assembly, standard plus torque rating.
20-.....	Selected Drive Plate, standard plus torque rating, heavy duty friction material.
40-....	Release Bearing.
60-.....	Heavy Duty Uprated Group 'N' Cover Assembly.
70-.....	Heavy Duty Uprated Organic Faced Drive Plate (Sprung Hub).
71-.....	Heavy Duty Uprated Organic Faced Drive Plate (Rigid Hub).
76-.....	Cerametallic Paddle Drive Plate (Sprung Hub)
78-.....	Cerametallic Paddle Drive Plate (Rigid Hub).

Helix has developed diaphragm spring cover assemblies to replace the original coil spring cover assembly fitted as O.E

Where possible these will bolt directly onto the flywheel . But in some installations the flywheel must be drilled & tapped to accommodate the new design.

Details & drawings of these dimensions can be supplied to modify the existing flywheel or Helix can manufacture and supply bespoke steel flywheels.

Note:-

If a vehicle is not listed that a clutch is required for. Please contact Helix as we are continually updating our range.

GROUP 'N' CLUTCH UNITS

HEAVY DUTY COVER ASSEMBLY

Series Part No 60-0000

The Helix clutch is intended for applications where the engine / vehicle performance has been increased above standard. All Helix Racing Clutches are manufactured from new components to the highest standards using the best materials available; they are designed to give a higher clamp load to cope with higher torque capacity together with an increase engine rpm. The units can be fitted as a direct replacement for the standard unit without modification to the flywheel and retaining the standard clutch release mechanism. There are a few exceptions and these are identified in the catalogue.

DRIVE PLATE ORGANIC SPRUNG CENTRE

Series Part No 70-0000

This type of drive plate is suitable for road use and light competition work. The design features damper springs arranged radially around the hub centre which together with facing segments provides progressive engagement and greater degree of clutch control. The organic facing material used is the best high performance material available with facings over 200mm diameter being metal backed to give much higher burst strength.

DRIVE PLATE ORGANIC RIGID CENTRE

Series Part No 71-0000

The rigid type of drive plate is not fitted with any form of damper cushioning and is specifically designed for more arduous conditions where the degree of comfort / refinement is second to durability and strength. Again only the best high performance organic friction facing material is used.

DRIVE PLATE CERAMETALLIC SPRUNG CENTRE

Series Part No 76-0000

This type of drive plate is more suitable for high energy competition applications like rallying although it can be used for road use where the organic drive plate cannot withstand the higher operating temperatures. The design incorporates a sprung centre to provide some protection against drive line shock. Manufactured with a rigid adaptor plate (instead of cushion segments) incorporating cerametallic pads as shown. This cerametallic material keeps its friction properties to a much higher temperature than the organic material.

DRIVE PLATE CERAMETALLIC RIGID CENTRE

Series Part No 78-0000

The rigid cerametallic drive plate has no form of damper or segment cushioning and is designed primarily for the most arduous of working conditions where strength and durability are paramount with the heat resistant properties of the cerametallic friction pads.
